

## Sharepoint Module for Jive

### Make SharePoint Social

You've invested too much to let critical information lie buried in your content management system, out of sight and out of mind. Jive unlocks the documents and ideas stored in Microsoft SharePoint and makes them easy to find, share and work with. You get best of both worlds: the document management features of SharePoint plus the rich social interaction of Jive.

Users can collaborate and communicate seamlessly, keeping everybody in sync and informed, whether they're working in Jive or SharePoint. For example, you can work with SharePoint documents in Jive, co-authoring, sharing and commenting as you would with any other Jive content. And users who need access to advanced SharePoint capabilities such as workflows and forms can work in SharePoint while still taking advantage of Jive activity streams, collaboration features and content. Choose whatever approach fits your needs to drive efficiencies and fully leverage your SharePoint investment.

## Seamless content storage from Jive

Jive's SharePoint Module provides a simple way to store content in SharePoint while using Jive as a collaboration and communication platform. Whether you're uploading a PowerPoint deck to a Jive group, or attaching a Word doc to a Jive discussion, all uploaded files and attachments are saved directly in

SharePoint. It's completely transparent – users don't even need to know that SharePoint is being used as the back-end document repository. In addition, Jive Tiles automatically surface relevant SharePoint lists (calendars, tasks, links, announcements) in Jive groups and spaces, allowing users to get more done in Jive. And full bi-directional search lets users easily find content whether it's in Jive or SharePoint.

## SharePoint with Sharing

In addition to enabling Jive users to work seamlessly with SharePoint content, our SharePoint Module brings a new level of connectedness and productivity to SharePoint itself. Users can work in SharePoint while viewing all activity and content in relevant Jive groups and spaces. And they can comment and participate in their Jive community directly from SharePoint, allowing them to continue to leverage SharePoint content management as needed for high-maintenance documents. Users can search across both environments in a single action.

## Mix and match to suit your needs

Whether you want SharePoint content in Jive or Jive collaboration features in SharePoint, you can use any combination of these scenarios to meet the needs of your organization and get the most out of your systems.

## Compatibility

This module is compatible with the following Jive products and versions:

- Jive Cloud
  - Supports SharePoint 2010 and 2013
- Jive Custom
  - Version 5.0.4 and above supports SharePoint 2007 and 2010
  - Version 6 and above supports SharePoint 2007, 2010 and 2013

# Licensing

The SharePoint Module is a paid option, but is included in the following package:

- Enterprise

For licensing details and further information please contact your Jive account representative or email us at [sales@jivesoftware.com](mailto:sales@jivesoftware.com).
